PROTEIN MARKER MAS

A ready-to-use three-colour protein standard with 12 pre-stained proteins covering a wide range molecular weight from 10 to 245 kDa. Proteins are covalently coupled with a blue chromophore except for two reference bands (one green and one red band at 25 kDa and 75 kDa respectively) when separated on SDS-PAGE (Tris-glycine buffer). It is designed for monitoring protein separation during SDS-polyacrylamide gel electrophoresis, verification of Western transfer efficiency on membranes (PVDF, nylon, or nitrocellulose) and for approximating the size of proteins. The ladder is supplied in gel loading buffer and is ready to use. Available in a pack of 5 with 500µl in each tube.

CAT No.: SMGBM-5MAS

Size Range: 10-245kDa

Volume: 500µl each tube

Contents: Approximately 0.1~0.4 mg/ml of each protein in the buffer (20 mM Tris-phosphate, pH 7.5 at 25°C), 2 % SDS, 0.2 mM Dithiothreitol, 3.6 M Urea, and 15 % (v/v) Glycerol).

Features:

- Solutions are prepared to be ready to load
- Visible during run time
- Bands have precisely defined sizes
- 25 and 72 kDa have brighter intensity for aiding in identification

Reactions:

- 3 ul or 5 ul per loading for clear visualization during electrophoresis on 15-well or 10-well mini-gel, respectively.
- 1.5~2.5 ul per well for general Western transferring. Apply more for thicker (> 1.5 mm) or larger gel.

Storage:

- Store at 25°C for up to 2 weeks
- Store at 4°C for up to 3 months
- Store at -20°C for long term storage

Quality Control: Under suggested conditions, PLUS Protein Ladder resolves 12 major bands in 15% SDS- PAGE (Trisglycine buffer) and after Western blotting to nitrocellulose membrane.
